                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    FUNCTION: Acts as a tumor suppressor in many tumor types; induces growth arrest or apoptosis depending on the physiological circumstances and cell type. Involved in cell cycle regulation as a trans-activator that acts to negatively regulate cell division by controlling a set of genes required for this process. One of the activated genes is an inhibitor of cyclin-dependent kinases. Apoptosis induction seems to be mediated either by stimulation of BAX and FAS antigen expression, or by repression of BC1-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DISEASE: p53 is found in increased amounts of transformed cells. p53 is frequently mut in many types of cancer.
SIMILARITY: BELONGS TO THE P53 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             expression.
SUBUNIT: Binds DNA as a homotetramer (By similarity).
SUBCELLULAR LOCATION: Nuclear.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NCBI_TaxID=9685
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Int. J. Cancer 58:602-607(1994).
                                                                                                                                                                                                                                                                                                                                                                            growth arrest or cell type. Involved in cell cylinter circumstances and cell type. Involved in cell cell division a trans-activator that acts to negatively regulate cell division by controlling a set of genes required for this process. One of the activated genes is an inhibitor of cyclin dependent kinases. Apoptosis induction seems to be mediated either by stimulation of a procession of Bcl-2
                                                                                                                                                                                                     in many types of cancer.
SIMILARITY: BELONGS TO THE P53 FAMILY.
                                                                                                                                                                                                                                                                                                             expression.
SUBURIT: Binds DNA as a homotetramer (By similarity).
SUBCELLULAR LOCATION: Nuclear.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MEDLINE=89083584; PubMed=3060861;
                                                                                                                                                                                                                                                                                                                                                                                       Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                circumstances and cell type. Involved in cell cycle regulation as a trans-activator that acts to negatively regulate cell division by controlling a set of genes required for this process. One of the activated genes is an inhibitor of cyclin-dependent klnases. Apoptosis induction seems to be mediated either by stimulation of BAX and FAS antigen expression, or by repression of BCl-2 expression (By similarity).
SUBCELLULAR LOCATION: Nuclear.
SIMILARITY: BELONGS TO THE P53 FAMILY.

Involved in cell cycle regulation as a trans-activator that acts to negatively regulate cell division by controlling a set of genes required for this process. One of the activated genes is an inhibitor of cyclin-dependent kinases. Apoptosis induction seems to be mediated either by stimulation of Apontosis Affactor expression, or by repression of Bcl-2

Involved in cell cycle regulation as a trans-activator that acts to negatively regulate cell division by controlling a set of genes required for this process. One of the activated genes is an inhibitor of cyclin-dependent kinases. Apoptosis induction seems to be mediated either by stimulation of BAX and FAS antigen expression, or by repression of Bcl-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SIMILARITY: BELONGS TO THE P53 FAMILY

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           FUNCTION: Acts as a tumor suppressor in many tumor types; induces growth arrest or apoptosis depending on the physiological circumstances and cell type. Involved in cell cycle regulation as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        indicus (Zebu).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          by controlling a set of genes required for this process. One of the activated genes is an inhibitor of cyclin-dependent kinases Apoptosis induction seems to be mediated either by stimulation BAX and FAS antigen expression, or by repression of Bcl-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             circumstances and cell type. Involved in cell cycle regulation as a trans-activator that acts to negatively regulate cell division
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           312
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             266

FUNCTION: Acts as a tumor suppressor in many tumor types; induces growth arrest or apoptosis depending on the physiological circumstances and cell type. Involved in cell cycle regulation as a trans-activator that acts to negatively regulate cell division by controlling a set of genes required for this process. One of the activated genes is an inhibitor of cyclin-dependent kinases. Apoptosis induction seems to be mediated either by stimulation of

CC cell regulatory proteins (CRPs) termed the p63 family of cell regulatory proteins (CRPs) termed the p63 family of proteins, CC which demonstrate certain sequence identity to known tumour continuous superessor proteins p53 and p73. It has been observed that the CC intron-exon organisation is conserved between p73 and p53, and from CC known exon and intron sizes for these 2 genes, it was possible to confamilifying 2 exons in a conserved domain and their intervening CC intron. The human p53 gene was localised to chromosomal position CC 3q27-29. At least 6 different isotypes exist. Splice variants CC differing at the C-terminus have been designated as alpha, beta and CC gamma forms, while p63 members differing in the N-terminus are CC designated as deltaN and TA forms, where the deltaN form lacks the CT transactivation domain. The present sequence represents human CC p63 isotype TAp63 beta. D63 was detected in a variety of human and mouse tissue. It demonstrates remarkably divergent activities, such as the ability to transactivate p53 reporter genes CC and induce apoptosis. Cessation or down-regulation of p63 expression CC may play a critical role in the process of cervical squamous cat as dominant negatives towards transactivation by p53 and p63. CC cachexia) and neuronal differentiation and related degenerative CC disorders. p63 polypeptides (see AAV58572-83) and anti-p63 antibodies of the invention can be used to CC identify compounds useful for treating disorders involving such CC contexis, in detection and diagnosis, and in the production of CC transgenic animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Best Local Similarity Matches 516; Conserv

                                                                                                                                                                                                                                    This invention describes a novel isolated polypeptide (I) which comprising an immunogenic portion of a lung tumor protein or variant (P2) which have cytostatic activity. The poptides and polynucleotides are used in compositions and vaccines to inhibit the development of cancer, especially lung cancer, in a patient. Methods described in the invention can be used to monitor the progression of a cancer by carrying out the detection at subsequent time points and comparing the results from the different time points. CD4+ and/or CD8+ T-Cells isolated from a patient are treated with P2, polynucleotides encoding P2 or antigen presenting cells expressing P2 and then administered to the patient to inhibit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Wang

CC protein or cellular protein isoforms (II) dependent on heat shock CC protein (HSP)-90, or selectively treating cells expressing (II) CC involving administering HSP90-inhibitor. The method is useful for CC involving genetically-defined disease with chromosomal aberration yielding CC oncogenic fusion protein, treating cancerous cells containing fusion CC protein in heterogeneous cell population, treating proliferative disease CC (e.g. rheumatoid arthritis or cancer) associated with mutant protein or CC cellular protein isoform dependent on heat shock protein (HSP)-90 (e.g. CF3), or selectively treating cells expressing mutant protein or cellular CC protein isoform in a patient heterozygous for (II). The method is useful CC protein isoform myeloid leukaemia (CML), APL, ALL, AML, NHL and CMML, CC or a disease characterised by a solid tumour such as T or B cell CC lymphoma, chronic myeloid leukaemia (CML), APL, ALL, AML, NHL and CMML, CC or a disease characterised by a solid tumour such as papillary thyroid CC carcinoma, Ewing's sarcoma, melanoma, liposarcoma, rhabdomyosarcoma and CCC infections. This is the amino acid sequence of a human oncogenic protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SPTQALPPPLSMPSTSHCTPPPPYPTDCSIVRIWQV

                                                                                                                                                                                                                                             망
                                                                                                                                                                                                                                                                   Q
                                                                                                                                                                                                                                                                                                                                                 The present invention describes isolated human lung carcinoma CC polynucleotides (I) and polypeptides (II). (I) and (II) have cytostatic activity, and can be used in gene therapy and in vaccines. Compositions comprising (I) or (II) can be used for stimulating an immune response in a patient and for treating lung cancer in a patient. Oligonucleotides of (I) can be used for detecting the presence of a cancer in a patient, by obtaining a biological sample from the patient, contacting the cotological sample with the oligonucleotide, detecting in the sample, an amount of polynucleotide that hybridises to the oligonucleotide and comparing the amount of polynucleotide that hybridises to the oligonucleotide to a predetermined cut-off value, and determining the presence of a cancer in the patient. (I) and (II) are useful in the paramaceutical compositions, e.g. vaccines. (I) is useful as a marker to confide the presence or absence of a cancer such as lung cancer.

CC AB092145 to AB092486 and ABP61866 to ABP6192 represent sequences used in the exemplification of the present invention.

                            The present invention describes human lung tumour proteins. Human lung tumour proteins and polynucleotides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynucleotides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABL48959 to ABL49500 and ABB74946 to ABB75070 represent sequences used in the exemplification of the present

The p51 gene can be used in the investigation, diagnosis and treatment of diseases such as cancer, with which the p53 family cell proliferation regulation is associated. The p51 protein may be used for screening potential agonists and antagonists of its regulatory function.

                                         The present invention concerns the discovery of a new family of cell regulatory proteins (CRPs) termed the p63 family of proteins, which demonstrate certain sequence identity to known tumour suppressor proteins p53 and p73. It has been observed that the clintron-exon organisation is conserved between p73 and p53, and from known exon and intron sizes for these 2 genes, it was possible to identify new members of this gene family using a PCR-based strategy of amplifying 2 exons in a conserved domain and their intervening intron. The human p53 gene was localised to chromosomal position 3q27-29. At least 6 different isotypes exist. Splice variants of differing at the C-terminus have been designated as alpha, beta and gamma forms, while p63 members differing in the N-terminus are transactivation domain. The present sequence represents human p63 isotype TAp63 alpha. 16 James tested in a variety of thems and the present sequence represents human p63 was detected in a variety of thems.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Cell regulatory protein; p63; huTAp63 alpha; TAp63 alpha; cancer; tumour suppressor; cell cycle control; apoptosis; cell proliferation; cell differentiation; therapy.
